

TASK 4: BASIC CHATBOT PROJECT DOCUMENTATION

1. PROJECT OVERVIEW & DESCRIPTION

This project is a simple, rule-based chatbot implemented in Python. It takes text inputs from a user, processes the text by standardizing it to lowercase, evaluates it against predefined conditional rules, and provides an immediate, matching response.

2. KEY FEATURES

- * Text Normalization: Handles uppercase inputs and extra spacing.
- * Predefined Mapping: Responds accurately to greetings and goodbyes.
- * Continuous Loop: Uses a execution loop to stay open until dismissed.

3. TECHNOLOGIES USED

- * Language: Python 3.x
- * Core Concepts: If-elif-else statements, functions, while loops.

4. HOW TO RUN THE APPLICATION

1. Ensure you have Python installed on your system.
2. Save the code below as a file named 'chatbot.py'.
3. Open your terminal or command prompt window.
4. Navigate to the folder containing the file.
5. Run the following command: `python chatbot.py`

5. EXAMPLE OF OUTPUT

Welcome to CodeAlpha Chatbot! (type 'bye' to exit)

You: hello

Bot: Hi there!

You: how are you

Bot: I'm good, thank you! How can I help you?

You: bye

Bot: Goodbye! Have a nice day!
